

Making Curls using a Pattern

Steps:

1. Place your pattern in a plastic sleeve or under an acetate sheet.
2. With a no.000 or 00 tube start to pipe over the pattern.
3. Continue to pipe making sure everything touches so there will be no breakages later.
4. This is how your curl piping should look.
5. Continue this for all your curls. Place in oven at 65° or dehydrator until they are set. You can also leave them on the bench to dry.
6. Once dry, using a knife, lift the curl from the plastic/acetate sheet.
7. This should still be nice and flexible and easy to handle.
8. Wrap around the outside of a pen or dowel. Return to oven/dehydrator/bench to harden.
9. When hard you will be able slowly remove the curl.
10. Completely remove the curl from the pen or dowel.
11. This is how your curl should look.
