Stencilling Chocolate Shards

Steps:

1. Pick which stencil you are going to use.
2. I only want to use ½ of this stencil, so I put sticky tape over the ½ I do not require.
3. This is how it looks.
4. Trim around the outside edge with scissors to remove excess tape.
5. Turn the stencil over and place tape on the corresponding side of the stencil.
6. Once again, trim the excess tape.
7. Place your chocolate shard onto some glad bake (silicon paper)
8. Place your stencil (the section that is not covered in tape) over the chocolate shard.
9. Palette using the custom green we mixed in Universal Magic (different tutorial) over the stencil.
10. Make sure all of the stencil is covered in gel. Remove the stencil carefully.
11. This is how the chocolate shard should look.
12. Continue to stencil all the chocolate shards you require.
